FOREWORD

International Standards produced by the Commission Internationale de l'Eclairage are concise documents on aspects of light and lighting that require a unique definition. They are a primary source of internationally accepted and agreed data which can be taken, essentially unaltered, into universal standard systems.

This CIE International Standard has been prepared by Technical Committee 2-83 "CIE standard on test methods for OLED light sources" of Division 2 "Physical measurement of light and radiation" of the Commission Internationale de l'Eclairage.
